

Decorative interlocking pavers

Quality solids. Technical datasheet. Generated 2026-04-21.

Summary

Architectural pavers with a treated face for entries and landscape bands. Best for pedestrian zones and light vehicles when the design allows.

Specifications

Type	Interlocking pavers
Nominal module height	62 mm typical (see dimensions)
Dimensions	Decorative face options (aged, riven, or scored). Sizes per pattern sheet; confirm at order.
Weight	Approx. 4.0 to 6.5 lb (1.8 to 3.0 kg) per unit, depending on profile and finish
Compressive strength	Typically 8,000+ PSI paving concrete. Batch certs on request.
Pricing	On request. Contact sales with project quantity and delivery site.

Applications

Building entries and porte-cochères
Landscape accents and banding
Courtyard focal paving

Compliance notes

Have the engineer confirm load rating if vehicles will track the area.
Color and texture vary by batch; request current samples.
Coordinate sealers and de-icing with the owner's maintenance plan.

Values marked as nominal or pending certification must be verified against the latest mill test reports before specification on sealed drawings.
